interactive lightbulb notes

I was able to make my background a dark gray which is a start, for now i just want pressing the down arrow key to change the background colour to a light gray

Releasing the down arrow key now sets it from a dark gray to light gray, I need to figure out how to use variables to let me set it back to a dark gray when pressed a second time.
Also one of the examples in MyCanvas is also an interactive lightbulb so I'm cooked ig </3.

I couldn't figure out changing the background with variables so for now, the down arrow key turns on the light, and the up arrow key turns it off.
